OUR STORY

When former Royal Air Force navigator Jan Waszkiewicz and machinist Stanley Zaleski immigrated to America in the years following World War II, they had a dream: to build the world's best eyewear. Using their knowledge of engineering and skills as master craftsmen, the founding partners put into place the exclusive technology and manufacturing process that remains at the cornerstone of our business today.

Settling in the small community of Randolph, MA., Waszkiewicz and Zaleski set themselves to the task of designing the optical tools and machinery needed to produce their product. They built a proprietary 200-step manufacturing process, and engineered nearly indestructible frame joints. Today, many of those same tools and machines are still in use at our factory.

Our Made in the USA heritage and our ties to military units around the world remain a source of pride. The HGU-4/P Aviator, the style that launched our brand, was designed for US fighter pilots, and is currently worn by members of the Royal Jordanian Air Force, the Swiss Army, and the Colombian Military, among others. We service NASA, the Navy Blue Angels, the Air Force Thunderbirds, the Canadian Snowbirds, and the Army's Golden Knights parachute team.

Randolph Engineering employs 100 people, including our own sales, marketing and customer service teams. We have held the line on American-made, creating jobs and contributing to the local economy during a time when most of our competitors moved overseas. Under the direction of president and CEO Peter Waszkiewicz, whose father was a founding partner, we are a recognized leader in the optical field. In addition to our role as a supplier to military units across the globe, we continue to create extraordinary eyewear for adventurers and tastemakers alike.

OUR TECHNOLOGY

Six weeks. Two hundred steps. A patented manufacturing process unlike any other. Each pair is built in our own factory by highly-skilled master craftspeople. Randolph speaks to those who see things differently; to those who value state-of-the-art technology and exacting standards of excellence. In this, there is no compromise.

Because our eyewear is Made in America right here in the small community of Randolph, MA, we are able to control each and every step in our complicated manufacturing process. Backed by a lifetime guarantee, our artisan frames are made by hand, using top-grade materials. Our attention to quality and detail is unsurpassed. The journey of each frame honors our promise: To build the world's finest eyewear, one pair at a time.

Simply put, there are no shortcuts. The way we build our eyewear today is virtually the same way we built it 45 years ago — by hand. The exclusive technology, including a 200-step manufacturing process developed by our founding partners, Jan Waszkiewicz and Stanley Zaleski, remains at the cornerstone of our business today. Waszkiewicz and Zaleski designed a proprietary solder machine and engineered nearly indestructible frame joints. All of which ensures our frames (there are 24 physical components in the Aviator alone) are built to last a generation — or two.

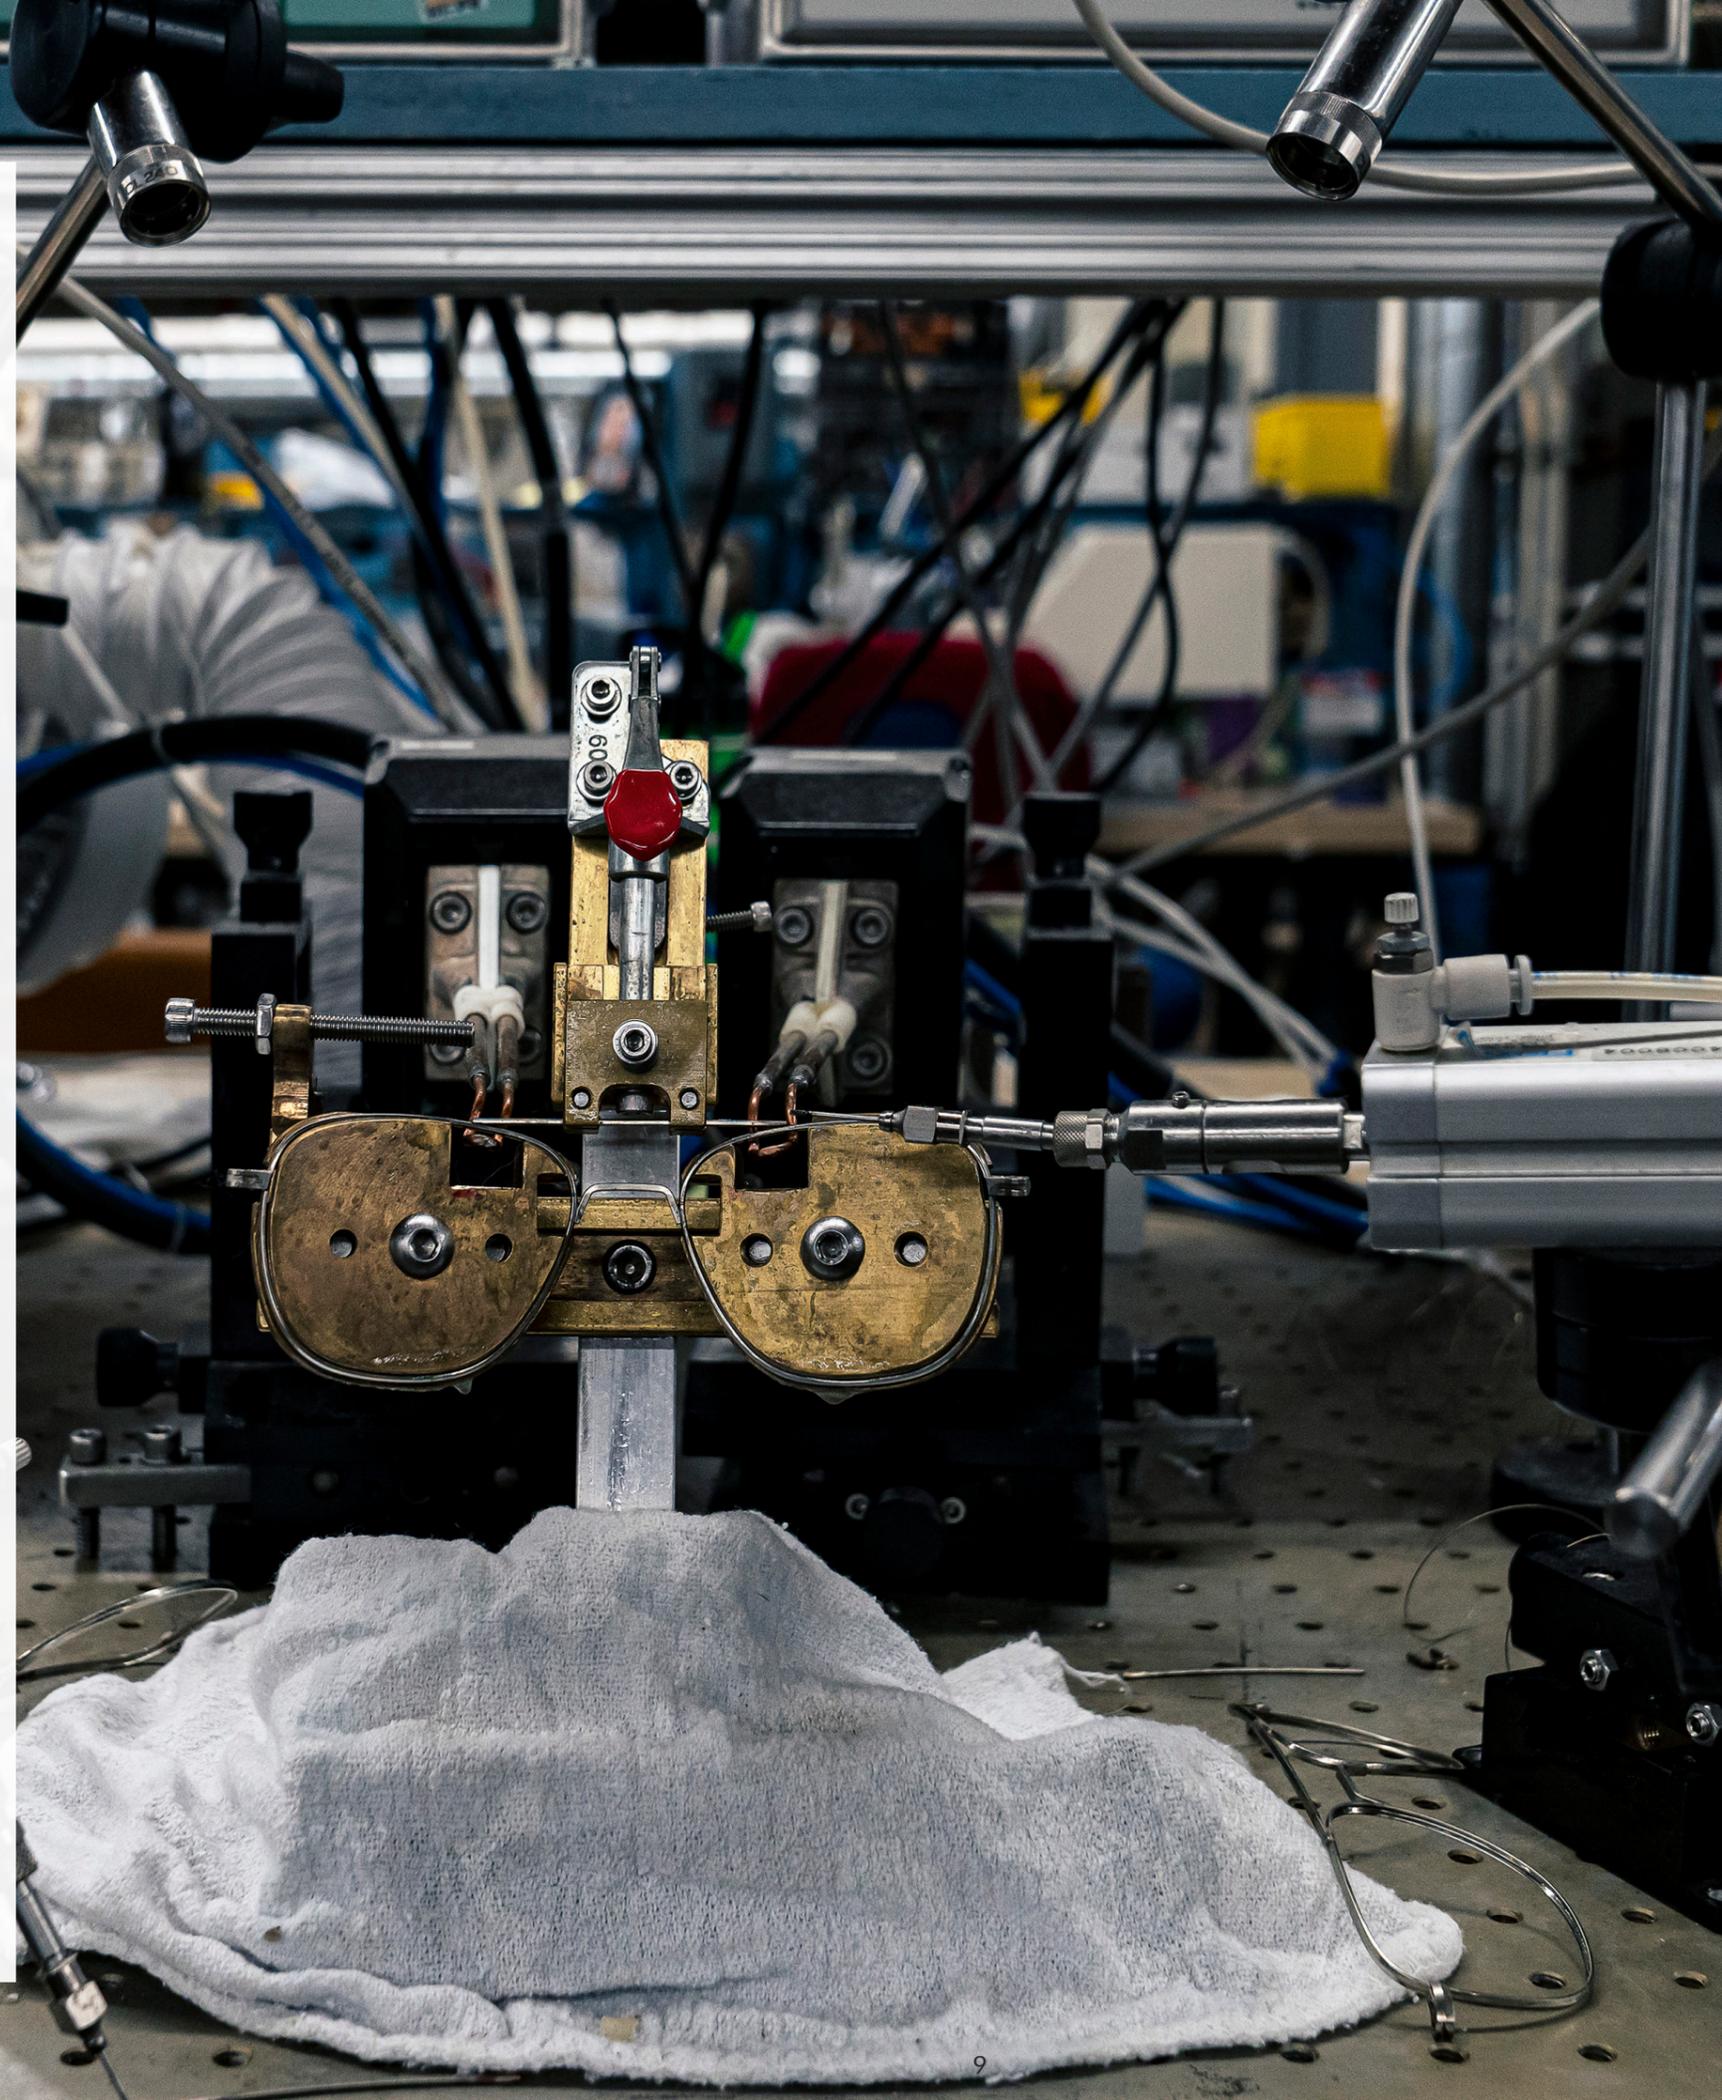

The process begins with top-grade materials, including the finest optical grade nickel-silver, monel, and stainless steel. Frame components are cut, shaped, molded, stamped and twisted by hand. Our hand-soldering techniques are executed by our top craftspeople, who spend years mastering the skill. Each component piece is polished by hand and tumbled with porcelain and ceramic stones before plating with one of our precious metal finishes.

Our proprietary plating process puts Randolph Engineering in a class by itself. Using the same precious metal finishes found on the world's finest timepieces, each frame base is coated in palladium, and plated in 23K Gold at 5 times the industry standard. To protect the soft gold plating, we apply a highly controlled layer of clear enamel. All of our metal frames are electroplated at a Rhode Island-based jewelry plating company. Finishes include our newest precious metal, White Gold, along with Yellow Gold, Chocolate Gold, Rose Gold, and Satin Rose Gold. Other options include Bright Chrome, Matte Chrome, Matte Black, Bronze Oxide, and Dark Ruthenium.

Our temple styles — Bayonet and Skull — are designed for comfort and longtime wear. The iconic Randolph Bayonet temples are designed to slide easily under pilot headsets, helmets and other headgear. The Skull temple is precision angled to prevent undue temple pressure. And the Cable offers a secure wrap around the ear for additional safety and comfort.

Our no-slip stainless steel screws are specially-designed with unique threading and locking compounds, and our silicone or titanium nose pads are designed to seamlessly blend into each frame design, providing a secure and comfortable fit. Each frame is hard-stamp embossed with the Randolph logo and laser printed on the interior temple and lens.

Our singular approach extends into each and every detail of our eyewear. Like a fine watch or a family heirloom, our frames are meant to last a generation — or two. Which is why Randolph Engineering also offers a signature engraving program. Each frame in our collection can be personalized with a short phrase, nom de plume or special date, ensuring that special moments are honored and preserved.

OUR LENSES

Delivering premium optical clarity and an enhanced visual experience.

Originally designed for the military, our unique portfolio of lenses reflects 45 years of knowledge and expertise. Based on established lens colors, treatments, and coatings, SkyTec™ Lens Technology delivers optimal performance across each of our three lens collections: SkyTec™ glass, SkyForce™ nylon, and SkyForce Air™ nylon gradient. Each of these three materials provides outstanding optical clarity and delivers the high level of performance we have built our reputation on. In fact, one of the many reasons the US Military has chosen RE sunglasses year after year is so that they can “visually own the sky” — without compromise.

Our lenses are sourced from world-class, high-quality suppliers who work with our own engineers to develop specific lens colors and performance characteristics based on visual attributes, light conditions, and changing environmental factors. By highlighting specific wavelengths of visible light, our lenses enhance vision and contrast. This is the key driving force behind all of our SkyTec™, SkyForce™, and SkyForce Air™ products.

Special Treatment – Randolph VECTOR™ AR Coating

Optical Quality Multi-Layer Premium AR Coating

- Hydrophobic
- Anti-static
- 99% Reflection Reduction
- Improves Visual Acuity and helps eliminate internal reflections

Blue Wave™ Blue Light and HEV Protection

All Randolph sunglasses protect and manage Low Level Blue Light and HEV – High Energy Visible Light with our **Blue Wave™** technology.

Blue light protection is critical for wearing eyewear in the sun and in today’s electronic world. Reducing and managing UV, Blue and High Energy Visible light can help prevent potential harmful eye problems such as macular degeneration, cataracts and decreased vision.

Randolph sunglasses with **Blue Wave™** technology manage and protect from potentially harmful UV, Low Level Blue and High Energy Visible Light. **Blue Wave™** is beneficial in reducing eye strain, better sleep patterns, improved night driving vision and overall increased visual acuity.

Unprotected exposure to Low Level Blue Light can contribute to:

- Red and irritated eyes
- Dry eyes
- Blurred vision
- Fatigue
- Headaches

Features and Benefits Randolph Blue Wave™

- Blocks, manages and reduces Low Level Blue and High Energy Visible light from electronic devices.
- Filters the most damaging Low Level Blue and High Energy Visible Light.

Helps improve:

- Sleep patterns
- Night driving vision
- Digital eye strain
- Visual Acuity

SkyTec™ Mineral Glass

Collections: Heritage.

SkyTec™ lenses deliver:

- Camera quality glass.
- Outstanding visual performance, clear sharp optics.
- Glass durability: scratch resistant and shatter resistant.
- All SkyTec™ lenses meet or exceed global standards for driving, optics, UVA, UVB and impact protection, including drop ball testing
- Available in solid tints and SkyTec-P™ polarized versions.

SkyForce™ Nylon

Collections: Latitude.

SkyForce™ lenses deliver:

SkyForce™ synthetic polymer material is 40% lighter than glass, 15% lighter than polycarbonate, and offers maximum UVA/UVB protection. Along with providing lightweight comfort, these lenses offer superior impact protection, scratch resistance, and outstanding optics. Available in solid tints and SkyForce-P™ polarized versions.

SkyForce Air™ Nylon Gradient

Collections: Latitude and Fusion.

SkyForce Air™ lenses deliver:

SkyForce Air™ nylon gradient lenses provide maximum UVA/UVB protection, along with the flexibility and versatility of a gradient tint. The darker tint at the top of the lens offers sun protection, while the lighter tint at the bottom of the lens allows for reading or a clear view of up close objects. Up to 40% lighter than glass, and up to 15% lighter than polycarbonate, SkyForce Air™ offers light weight comfort, great impact protection, scratch resistance, and outstanding optical performance.

Randolph SkyTec™ Glass Lenses Protect & Manage IR - Infrared Rays

Infrared is invisible long wavelength light at the far right end of the spectrum, occurring from 700 nm and up. Commonly known as Heat Radiation or Heat Waves. While not necessarily damaging to the eyes in normal conditions, IR can have some side effects, especially to contact lens wearers. IR, being a heat ray, can potentially cause dry eye conditions or tired eyes.

Technical Specifications

SkyTec™, SkyForce™, and SkyForce Air™ meet or exceed all global standards. ANSI, EN, AU/NZ and ISO for UV, optics, impact, and driving. Randolph manufacturing facility is ISO certified.

SkyTec™ Mineral Glass

- ABBE Value 59
- Index of refraction 1.52
- Specific Gravity 2.54
- Scratch Resistance 5

SkyForce™ Nylon & SkyForce Air™ Nylon Gradient

- ABBE Value 43
- Index of refraction 1.51
- Specific Gravity 1.14
- Scratch Resistance 3.5

RANDOLPH RX OWN THE SKY

The authentic Randolph RX lenses offer the same clarity and performance expected from Randolph Lenses. Available in eight of our signature tints and thirteen frame options. Our SkyOne™ single vision and SkyPro™ progressive are available in both Polycarbonate and Trivex lens material.

SKYONE™ & SKYPRO™ LENS TECHNOLOGY

SkyOne™ and SkyPro™ lenses are a custom-optimized design that maximizes a patient's particular visual needs. SkyOne™ and SkyPro™ lenses allow for precise reduction of blur and distortion to deliver the personalized power where it is needed most. The HD digital back-surface technology utilizes each patient's PD, fitting height and Rx to automatically optimize the entire prescription for best fit and overall visual clarity. Using this advanced technology provides your patient the best visual experience available today.

- Customized Position-of-Wear (POW) measurements
- Wider fields of view for increased image stability
- Edge-to-edge distortion free vision with no swim effect
- Eye movement compensation
- Oblique aberration correction
- SkyPro™ Minimum Fitting Height is 14mm

Available through VisionWeb direct to the Randolph lab

- Real time order tracking and more
- Select Randolph as the lab, fill in Rx, frame and lens details
- Orders shipped direct back to your office when completed via 2nd Day Air

Specially designed digital HD SkyOne™ single vision and SkyPro™ progressive in Polycarbonate and Trivex

- Optimized lens designs, compatible with Randolph frames to deliver optimal performance for active lifestyles
- Wide power range
- Tinted and Polarized in both materials and lens styles (except gradients)
- Available in 8 Randolph signature tints and 13 Rx frame styles

SkyTec™, SkyForce™ and SkyForce Air™ lens colors and treatments match our original plano sunglasses

All Rx's include Randolph's exclusive Vector™ Optical Quality Multi-Layer Premium AR Coating

- Hydrophobic
- Anti-static
- 99% Reflection Reduction
- Improves Visual Acuity and helps eliminate internal reflections

OUR COLORS

Lens Material:

SkyTec™	Mineral Glass
SkyForce™	Nylon
SkyForce Air™	Nylon Gradient
P	Polarized

American Gray

Lens Collections: SkyTec™, SkyTec-P™ & SkyForce™
Our signature neutral gray lens, originally engineered for military pilots. Maintains 'true' color and contrast distribution throughout all light and terrain conditions.

Granite

Lens Collections: SkyTec-P™
Make a statement. This iconic lens adds a multi-layer silver mirror to our signature American Gray lens (originally engineered for military pilots), all with built-in polarization properties.

Coastal Gray

Lens Collections: SkyForce Air™
This subtle gray gradient lens reminiscent of the shoreline skies is a great neutral lens for every day wear.

American Tan

Lens Collections: SkyTec™ & SkyTec-P™
Provides contrast enhancement and depth perception superior to other lens colors for a sharp and crisp view, even on cloudy days.

Autumn Sunset

Lens Collections: SkyForce-P™
With a warm Grey viewing experience, the low hue Orange / Red flash offers depth with a subtle mirror. Polarized to reduce glare, a perfect lightweight lens for everyday wear.

Cape Sand

Lens Collections: SkyForce Air™
Named after the color of the sand on Cape Cod, this classic tan gradient lens is a solid staple for your wardrobe.

Harvest

Lens Collections: SkyForce Air™
A copper gradient lens with hints of warm amber and coated with a metallic silver flash coating.

Rose Gold

Lens Collections: SkyForce™
A stunning shiny rose multi-layer mirror that reduces glare and provides a neutral all-purpose tint.

AGX

Lens Collections: SkyTec™, SkyTec-P™ & SkyForce™
This 'relaxing' green lens selectively highlights the soothing green/yellow wavelengths of the light spectrum to reduce eye fatigue and improve visual performance.

Acadian

Lens Collections: SkyForce-P™
This 'relaxing' green lens selectively highlights the soothing green/yellow wavelengths of the light spectrum to reduce eye fatigue and improve visual performance.

Evergreen

Lens Collections: SkyForce Air™
A green gradient lens that selectively filters color to reduce eye fatigue and improve visual performance. Similar to our AGX lens.

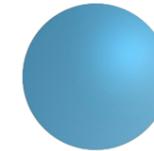

Cobalt

Lens Collections: SkyTec-P™
A performance polarized 'relaxing' green base lens with a subtle blue iridescence that selectively highlights the soothing green/yellow wavelengths found in nature.

Atlantic Blue

Lens Collections: SkyForce™
A stunning cobalt-blue multi-layer mirror that reduces glare and provides a neutral all-purpose tint.

Mystic Blue

Lens Collections: SkyForce-P™
A medium Grey viewing experience offers full protection with brilliant outer Blue coloring. Polarized to reduce glare, a perfect lightweight lens for everyday wear.

Blue Hydro

Lens Collections: SkyTec™
Sharpens outdoor clarity and makes the colors of nature pop to life. A medium mid-range tint, highlighting green, yellow and red, gives an overall effect of enhanced contours and sharper color definition.

Slate

Lens Collections: SkyForce Air™
A nod to slate and its color undertones, this attractive Blue / Gray Gradient lens is excellent for every day wear.

Northern Lights

Lens Collections: SkyForce Air™
Sure to turn heads, this cobalt-blue metallic flash mirror lens with a tan gradient base is a must-have for your fashion wardrobe.

THE LATITUDE COLLECTION

Bold. Colorful. Individual style. Timeless shapes in frame and lens combinations that are as adventurous as they come. Latitude plays off the heritage of daring aviators and pays homage to brave women of the sky. Available in a variety of finishes, each frame in this unique collection features our **SkyForce™** nylon, **SkyForce Air™** nylon gradient, or **SkyForce-P™** polarized lens technology. Lightweight. Superior optical quality. Latitude is for those who strive to stand out, wherever the adventure leads.

LATITUDE COLLECTION

AMELIA

The name pays homage to the iconic Amelia Earhart, the first female to fly solo across the Atlantic. This teardrop, lightweight, fashion-forward Aviator lends an elegant, laid-back air to any look. Wrapped lenses cover a larger range of the face than our classic Aviator styles, preventing as much light as possible from entering the eye.

OPTICAL FRAMES

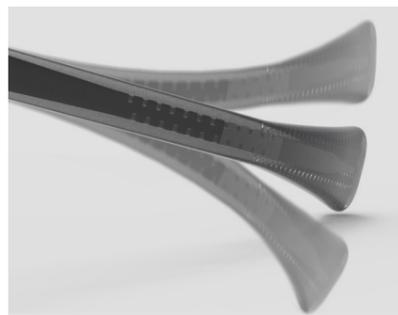

A distinctive collection inspired by the foundries that took fire and metal and created history. Featuring crisp strong edges with elegant finishes. Cut from a single sheet of stainless steel and soldered by hand the collection pays homage to industrial settings from which the materials are formed.

5 BARREL HINGE

The all new custom 5 BARREL exposed hinge is the centerpiece of the all new FOUNDRY collection. Offering a enduring and smooth action every time.

AILERON TEMPLES

Named for the hinged flight control surface that stabilizes aircraft during flight. The unique design of these temples allow for a wide range of movement for custom fit.

TEXTURE TEMPLE SLEEVES

The all new temple sleeves feature a textured tip for maximum grip and are locked into the frame to ensure the frame and sleeve do not separate.

COATINGS

PVD (PHYSICAL VAPOR DEPOSITION)

PVD is a vacuum coating process that produces a brilliant decorative and durable finish. PVD coatings are used in many applications such as Automotive, Medical, Fine Watches and Jewelry due to the precision and durability the coating has to offer.

ELECTROPLATING

The same precious metal finishes found on the world's finest timepieces applied at up to 5 times the industry standard and electroplated for maximum durability and scratch-resistance.

CERAKOTE

Cerakote a Polymer-Ceramic Composite coating that can be applied to metals, plastics, polymers and wood. This ceramic coating enhances a number of physical performance properties including abrasion/wear resistance, corrosion resistance, chemical resistance, impact strength, and hardness.

The FOUNDRY collection uses a combination of all three of these coatings to ensure a brilliant finish with durability to match.

 58 - 58mm / 47.5mm
DBL: 20
Temple Length: 140mm
Temple Styles: Skull, Bayonet
Base Curve: 6

HERITAGE OPTICAL
AVIATOR

The real deal. Our Aviators are built to precise military standards (Mil-S-25948, to be exact). Battle tested and suitable for the most demanding situations, these glasses are worn by U.S. military pilots, tastemakers, and those who demand the best.

HERITAGE OPTICAL

P3

Originally designed for use inside navy submarines, this retro P3 style is a favorite among those looking for a vintage and slightly edgy look. Built to meet the same military standards as our classic Aviator, they offer a playful take on a military heritage.
